

The Revotec TDC01 comprises an adjustable timer that switches on a 20 amp relay for a set time. The timer can be set or reset at any time during the set period.

The normally open relay contacts can be wired to switch on any electrical load up to 400 volts and at a load current of 20 Amps. This will enable most fans, motors and electrical equipment to be switched on for a set period simply by hitting the "Start" button.

The TDC01 requires a 12 volt supply and only requires 0.1 Amps to operate.

### Technical Specification TDC01

Supply Voltage	12 Volts DC +/- 3 volts
Supply current	0.1 Amp
Time setting	0-7 minutes
Relay contacts rating	Max 400 volts 20 Amps
Ambient Temperature	0-50 degrees C

Typical application for switching on a fan for a set time when used with a Revotec Fan Controller.
